Subject: NSRL Glyphosate
Date: Tuesday, June 20, 2017 4:16:54 PM

I am a moderate person with an 11 year old daughter and I don't feel there is a reasonable level of glyphosate in our food or environment above 0%. Farming and individuals are spraying Roundup at scary rates that is made from glyphosates while studies have linked glyphosates to immune deficiency, cancer, ADHD, brain disorders, obesity, gastrointestinal disorders, Alzheimer's and autism.

In 1970 autism was diagnosed in 1 out of 10,000 children - in 1995 1 out of 1000 children. Today the rate is 1 child out of 70!

Please think of future children and our living planet. We are killing the human species by polluting our planet.

Thank you,
Leslie Wall
